Information passed to me by phone

STATINTL by [redacted]

A 50mm lens (1" x 1 3/4" format) with a f 2 aperature (1") must have the nodal point of the camera + calibrator lenses no farther apart than 3.4" to cover a 40° field.

Front nodal point of colimator lens 2.85" from front surface of lens. An addition a glass plano parallel protective glass will consume a additional but as yet undetermined distance.
